                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ŏ
```

The invention relates to avilamycin derivatives (I) with antibacterial, virucide, protozoacide and fungicide activity. (I) are useful for treatment of infections (bacterial, viral, protozoal or fungal), in human or veterinary medicine, particularly where caused by Staphylococcus aureus. (I) are more hydrophilic than known avilamycins. The present sequence is that of a nucleic acid encoding avilamycins synthesis enzymes from the Streptomyces viridochromogenes Avilamycin A biosynthetic gene cluster (ABZ37515-ABZ37516)

                                                                                                                                                                                                                            The invention relates to avilamycin derivatives (1) with antibacterial, virucide, protozoacide and fundicide activity. (1) are useful for treatment of infections (Dacterial, viral, proctozoal or fungal), in human or veterinary medicine, particularly where caused by Staphylococcus aurens. (1) are more hydrophilic than known avilamycins. The present sequence is that of a nucleic acid encoding avilamycins synthesis enzymes from the Streptomyces viridochromogenes Avilamycin A biosynthetic gene

virucide, protozoacide and fungicide activity. (I) are useful for treatment of infections (bacterial, viral, protozoal or fungal), in human or veterinary medicine, particularly where caused by Staphylococcus aureus. (I) are more hydrophilic than known avilamycins. The present sequence is that of a nucleic acid encoding avilamycin synthesis enzymes from the Streptomyces viridochromogenes Avilamycin A biosynthetic gene
                                                                                                                                                                                                                                                                                                                                                                                   invention relates to avilamycin derivatives (I) with antibacterial,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TCCTCCCCGGCTACAGACAGCTCATGGCCGCGGAGTACGTCGACAGCCACCAGCGGGCAC

```
This is the 5' region of DNA coding for an antigenic portion of Mycobacterium tuberculosis antigen XP22; 3' DNA is provided in AAV4437.

XP22 DNA was isolated from a M. tuberculosis strain Erdman genomic DNA expression library using sera from patients having extrapulmonary tuberculosis. It bears no similarity to known sequences. The invention clates to methods and compositions for diagnosing tuberculosis. It provides polypeptides (see AAW64291-W64379) comprising an antigenic portion of a soluble M. tuberculosis antigen, as well as DNA sequences encoding such transfected host cells. Also claimed are methods and diagnostic kits for transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies or oligonucleotide probes and primers. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                              New isolated Mycobacterium tuberculosis polypeptides and DNA - used develop products for the detection of M. tuberculosis infection and diagnosis of tuberculosis.
                                                                                         Houghton

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          638 CACCGGAGGACCGGAACAGTGTGGCGGCGATGCAGTCTGAGCCTGGGAGCGAGGAGCCAT 697
                                                                                                                                                                                                                                                               This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              578 CGCGAAGCGAGGAGGAGGATGTTCAGGCTGCAGGCAGGCCGGGTGGGAGCAGCAGCAC

GENERAL INFORMATION:

APPLICANT: Harpold, Michael

APPLICANT: Williams, Mark

APPLICANT: Williams, Mark

APPLICANT: Gillespie, Alison

APPLICANT: Redman, Daniel

APPLICANT: Redman, Daniel

APPLICANT: METHODS

TITLE OF INVENTION: HUMAN CALCIUM CHANNEL COMPOSITIONS AND

TITLE OF INVENTION: METHODS

NUMBER OF SEQUENCES: 38

CORRESPONDENCE ADDRESS:

ADDRESSEE: Brown, Mark
